Notes:

Introduction

Introduction - Versions in UBL

Expected to have heterogeneous deployments of UBL implementations around the world

- different versions published by the OASIS UBL committee
- different customizations defined in user communities with different requirements
- different value constraints defined in different trading partner relationships for an individual

Cannot expect all users of UBL worldwide to keep in lock-step with one version of UBL

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

Notes:

Role of schema validity

Introduction - Versions in UBL

Danish government representative to UBL Committee member:

- "Thousands of Danish Java programmers need to use OIOUBL XML without knowing XML syntax or PSVI concepts ... just load up the data structures and Java programs will work with the information ... no other possible way of doing instance inspection except through off-the-shelf language bindings."

Assumed need for schema validity in order for the data structures to be properly loaded.

Assumed not to be localized only to Danish Java programmers (those are the only ones we've heard from).

Notes:

Published receiver processing model for a like-versioned UBL system

Introduction - Versions in UBL

The version of the UBL instance produced by the sender is assumed to be the same as that supported by the receiver.

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

Notes:

Versions of the UBL specification

Module 1 - Versions of the UBL specification

Select Naming and Design Rules (NDR):

- [CTD2] Every ccts:ABIE xsd:complexType definition content model MUST use the xsd:sequence element containing references to the appropriate global element declarations. *[Ed. note: i.e. no xsd:choice constructs allowed]*
- [ELD3] For every class and property identified in the UBL model, a global element bound to the corresponding xsd:complexType MUST be declared. *[Ed. note: i.e. the Garden of Eden approach to document modeling]*
- [GXS14] The xsd:any element MUST NOT be used except within the ExtensionContentType type definition, and with xsd:processContents="skip" for non-UBL namespaces.

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

Major vs. minor vocabulary versions

Module 1 - Versions of the UBL specification

Lesson 1 - Major vs. minor vocabulary versions

More NDR:

- [VER5] for UBL minor version changes the namespace name must not change.
- [VER10] UBL Schema and schema module minor version changes MUST not break semantic compatibility with prior versions.

An instance self-declares its version:

- [VER15] Every UBL document schema must declare an optional element named "UBLVersionID" immediately following the optional "UBLExtensions" element.

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

<http://www.CraneSoftwrights.com>

Copyright © Crane Softwrights Ltd.

Notes:

UBL common library and new document types

Module 1 - Versions of the UBL specification

Lesson 2 - UBL common library and new document types

Schema design inherited from xCBL precursor to UBL:

- one common library of all shared business objects
- 31 different document types define only the document element of each message

Revising all objects involves only revising the common library

Adding new document types to meet user requirements may add new objects to the common library

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

Balisage 2008 - Montréal, Québec, Canada

<http://www.CraneSoftwrights.com>

Copyright © Crane Softwrights Ltd.

Notes:

Minor versioning for backward compatibility

Module 1 - Versions of the UBL specification

Lesson 3 - Minor versioning for backward compatibility

Only optional constructs can be added to the common library

- e.g. all instances of UBL 2.5 are, automatically, also instances of UBL 2.7

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

Copyright © Crane Softwrights Ltd.

Notes:

Processing model for forward compatibility

Module 1 - Versions of the UBL specification

Lesson 4 - Processing model for forward compatibility

Removes unrecognized constructs from an instance, but only if original does not violate expected constraints.

Contrast this with Published receiver processing model for a like-versioned UBL system (page 5)

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

<http://www.CraneSoftwrights.com>

Copyright © Crane Softwrights Ltd.

Notes:

Version high water mark

Module 1 - Versions of the UBL specification

Lesson 5 - Version high water mark

Which should a 2.7 system creating an instance using only 2.3 constructs show?

- <cbc:UBLVersionID>2.3</cbc:UBLVersionID>
- <cbc:UBLVersionID>2.7</cbc:UBLVersionID>

Logic implies "2.3"

Pragmatism implies "2.7"

Since a 2.3 system won't choke on a 2.7 instance using only 2.3 constructs, pragmatism trumps logic.

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

Notes:

Schema synthesis

Module 1 - Versions of the UBL specification
Lesson 6 - Schema synthesis

The information model captures all granularity, order, cardinality and label information for the NDR to change into schema expressions.

The information model orders all BBIE constructs before all ASBIE constructs in an ABIE.

Minor versions are re-expressed as a complete set of schema expressions without using W3C Schema redefinition constructs.

Notes:

Customizations of UBL

Module 2 - Customizations of UBL

UBL defines many possible constructs useful in business transactions.

Communities of users may dictate certain optional ones are of no interest at all.

Communities of users may require additional ones not conceived by the committee.

+//ISBN 1-894049::CSL::Presentation::UBLVER/DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

Notes:

UBL Compatibility

Module 2 - Customizations of UBL

Lesson 1 - UBL Compatibility

Basing interoperability on the ontological/semantic interpretation of business objects based on agreed-upon definition of UBL business objects.

Granularity, cardinality, order and labeling of constituent XML constructs irrelevant to published UBL schemas.

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

Notes:

Profiles

Module 2 - Customizations of UBL
Lesson 2 - UBL Conformance

One community may define different customized versions of the same UBL document for use in different transactions scenarios

e.g. UBL Invoice

- many omissions from OASIS version for use in simplified procurement
- few omissions from OASIS version for use in detailed procurement

Conformant schema representation (cont.)

Module 2 - Customizations of UBL

Lesson 2 - UBL Conformance

Surprising backlash of "mistrust" for the subset schema to be reconstituted from scratch.

More anecdotal acceptance of "pruning" the OASIS schema artefacts using XML comment constructs around unwanted schema declarations

- users can "see" the OASIS artefacts are being used

Regardless of the expression approach, how can subset conformance be proven?

+//ISBN 1-894049::CSL::Presentation::UBLVER//DOCUMENT Versions in UBL 2006-11-30 02:50UTC//EN

Notes:

Using XPath files for validating conformance

Module 2 - Customizations of UBL

Lesson 3 - Using XPath files for validating conformance

UBL Human Interface Subcommittee created artefacts expressing elements in context

- schema expressions only show parent/child relationships
- non-XML-aware stakeholders cannot picture entire tree with elements in contexts

Validating model conformance requires testing possible elements in context

- some early customizations did not follow NDR and had contextual differences in element constraints

Re-using existing HISC artefacts makes sense rather than inventing new artefacts.

Trading partner agreements on value constraints

Module 3 - Trading partner agreements on value constraints

Lesson 1 - Trading partner agreements on value constraints

An individual using the original UBL or a community's customization has changing business requirements:

- changing over time for a given trading partner
- different between different trading partners

Value constraints may be different in different contexts for the same information item

Different collections of value constraints represent a different "version" of using UBL.

Conclusion

Conclusion - Versions in UBL

Many versions of UBL used around the world:

Versioning approaches support document-level schema validity across all versions

Versions in UBL

Table of contents
Indexed by slide number

-
- 001 [Prelude] Versions in UBL (Prelude)
 - 002 Versions in UBL
 - 003 [Introduction -1-1] Introduction
 - 004 [Introduction -2-1] Role of schema validity
 - 005 [Introduction -3-1] Published receiver processing model for a like-versioned UBL system
 - 006 [1] Versions of the UBL specification
 - 007 [Introduction 1-1-1] Versions of the UBL specification
 - 008 [1-1-1-1] Major vs. minor vocabulary versions
 - 009 [1-2-1-1] UBL common library and new document types
 - 010 [1-3-1-1] Minor versioning for backward compatibility
 - 011 [1-4-1-1] Processing model for forward compatibility
 - 012 [1-5-1-1] Version high water mark
 - 013 [1-6-1-1] Schema synthesis
 - 014 [2] Customizations of UBL
 - 015 [Introduction 2-1-1] Customizations of UBL
 - 016 [2-1-1-1] UBL Compatibility
 - 017 [2-2-1-1] UBL Conformance (018) (019) (020)
 - 021 [2-2-2-1] Profiles
 - 022 [2-2-3-1] Conformant schema representation (023)
 - 024 [2-3-1-1] Using XPath files for validating conformance (025) (026) (027) (028)
 - 029 [3] Trading partner agreements on value constraints
 - 030 [3-1-1-1] Trading partner agreements on value constraints
 - 031 [3-1-2-1] Associating values with document contexts
 - 032 [3-1-3-1] Contextual uses of code lists
 - 033 [3-1-4-1] Value-level meta data
 - 034 [3-1-5-1] Instance-level meta data
 - 035 [3-1-6-1] Validation artefacts
 - 036 [Conclusion -1-1] Conclusion
 - 037 [Postlude] Versions in UBL (Postlude)
